

Рассмотрим геометрический интеграл:

$$\prod_a^b f(x)^{dx} = \lim_{\Delta x \rightarrow 0} \prod_{i=1}^n f(x_i)^{\Delta x}$$

Данный интеграл имеет следующую связь с обыкновенным интегралом

$$\prod_a^b f(x)^{dx} = \lim_{\Delta x \rightarrow 0} e^{\sum_{i=1}^n \ln f(x_i) \cdot \Delta x} = e^{\int_a^b \ln f(x) dx}$$

Теперь рассмотрим следующий предел:

$$\lim_{\Delta x \rightarrow 0} \left(\frac{f(x + \Delta x)}{f(x)} \right)^{\frac{1}{\Delta x}}$$

Назовём этот предел геометрической производной и обозначим f^* . Вычислив этот предел, можно получить связь с обыкновенной производной:

$$\begin{aligned} f^*(x) &= \lim_{\Delta x \rightarrow 0} \left(\frac{f(x + \Delta x)}{f(x)} \right)^{\frac{1}{\Delta x}} = e^{\ln \lim_{\Delta x \rightarrow 0} \left(\frac{f(x + \Delta x)}{f(x)} \right)^{\frac{1}{\Delta x}}} = \\ &= e^{\lim_{\Delta x \rightarrow 0} \frac{\ln f(x + \Delta x) - \ln f(x)}{\Delta x}} = e^{\ln' f(x)} = e^{\frac{f'}{f}} \end{aligned}$$

Частные производные

$$\begin{aligned}
 f_{x_i}^*(x_1, \dots, x_i, \dots, x_n) &= \lim_{\Delta x \rightarrow 0} \left(\frac{f(x_1, \dots, x_i + \Delta x, \dots, x_n)}{f(x_1, \dots, x_i, \dots, x_n)} \right)^{\frac{1}{\Delta x}} = \\
 &= e^{\lim_{\Delta x \rightarrow 0} \left(\frac{f(x_1, \dots, x_i + \Delta x, \dots, x_n)}{f(x_1, \dots, x_i, \dots, x_n)} \right)^{\frac{1}{\Delta x}}} = \\
 &= e^{\lim_{\Delta x \rightarrow 0} \frac{\ln f(x_1, \dots, x_i + \Delta x, \dots, x_n) - \ln f(x_1, \dots, x_i, \dots, x_n)}{\Delta x}} = \\
 &= e^{\ln'_{x_i}(f(x_1, \dots, x_i, \dots, x_n))} = e^{\frac{f'_{x_i}(x_1, \dots, x_i, \dots, x_n)}{f(x_1, \dots, x_i, \dots, x_n)}}, \quad i = \overline{1, \dots, n}
 \end{aligned}$$

Полный дифференциал

$$\begin{aligned}
 \Delta^* f &= \frac{f(x + \Delta x, y + \Delta y)}{f(x, y)} = \frac{f(x + \Delta x, y + \Delta y)}{f(x, y)} \cdot \frac{f(x, y + \Delta y)}{f(x, y + \Delta y)} = \\
 &= \frac{f(x + \Delta x, y + \Delta y)}{f(x, y + \Delta y)} \cdot \frac{f(x, y + \Delta y)}{f(x, y)} = \left(\frac{f(x + \Delta x, y + \Delta y)}{f(x, y + \Delta y)} \right)^{\frac{\Delta x}{\Delta x}} \cdot \left(\frac{f(x, y + \Delta y)}{f(x, y)} \right)^{\frac{\Delta y}{\Delta y}} = \\
 \lim_{(\Delta x, \Delta y) \rightarrow (0, 0)} \Delta^* f &= \lim_{(\Delta x, \Delta y) \rightarrow (0, 0)} \left(\frac{f(x + \Delta x, y + \Delta y)}{f(x, y + \Delta y)} \right)^{\frac{\Delta x}{\Delta x}} \cdot \lim_{\Delta y \rightarrow 0} \left(\frac{f(x, y + \Delta y)}{f(x, y)} \right)^{\frac{\Delta y}{\Delta y}} = \\
 &= e^{\lim_{(\Delta x, \Delta y) \rightarrow (0, 0)} \frac{[\ln f(x + \Delta x, y + \Delta y) - \ln f(x, y + \Delta y)] \Delta x}{\Delta x}} \cdot e^{\lim_{\Delta y \rightarrow 0} \frac{[\ln f(x, y + \Delta y) - \ln f(x, y)] \Delta y}{\Delta y}} = \\
 &= e^{\lim_{\Delta y \rightarrow 0} \frac{f'_x(x, y + \Delta y)}{f(x, y + \Delta y)}} \cdot e^{\frac{f'_y(x, y)}{f(x, y)} dy} = e^{\frac{f'_x(x, y)}{f(x, y)} dx} \cdot e^{\frac{f'_y(x, y)}{f(x, y)} dy} = f_x^{*dx} \cdot f_y^{*dy}
 \end{aligned}$$

$$d^* f = f_x^{*dx} \cdot f_y^{*dy}$$

Теперь найдем обратный оператор с f^* . Для этого попробуем выразить f . Обозначим $u = e^{\frac{f'}{f}}$. Тогда

$$f^*(x) = u(x)$$

$$\ln' f(x) = \ln u(x)$$

$$\ln f(x) = \int_0^x \ln u(s) \, ds + \ln f(0)$$

$$f(x) = f(0) \cdot e^{\int_0^x \ln u(s) \, ds}$$

Получили геометрический интеграл с переменным верхним пределом.

$$\prod_{\tilde{C}}^x f(s)^{ds} = e^{\int_{\tilde{C}}^x \ln f(s) \, ds} = e^{F(x) - F(\tilde{C})} = \frac{e^{F(x)}}{e^{F(\tilde{C})}} = C e^{F(x)}$$

$$\begin{aligned} \left(\prod_{\tilde{C}}^x f(s)^{ds} \right)^* &= e^{\lim_{\Delta x \rightarrow 0} \frac{\int_{\tilde{C}}^{x+\Delta x} \ln f(s) \, ds - \int_{\tilde{C}}^x \ln f(s) \, ds}{\Delta x}} = \\ &= e^{\lim_{\Delta x \rightarrow 0} \frac{\int_{\tilde{C}}^{x+\Delta x} \ln f(s) \, ds + \int_x^{\tilde{C}} \ln f(s) \, ds}{\Delta x}} = e^{\lim_{\Delta x \rightarrow 0} \frac{\int_x^{x+\Delta x} \ln f(s) \, ds}{\Delta x}} = e^{\ln f(x)} = f(x) \end{aligned}$$

Прикольные штуки для производных

$$a^* = \lim_{\Delta x \rightarrow 0} \left(\frac{a}{a} \right)^{\frac{1}{\Delta x}} = 1^\infty = 1$$
